**Summary of Changes**

Date change for "first reporting period end date" from July 1, 2016 to June 30, 2016  
Assessment Areas acreage breakdown have been updated  
The description for how the Project Area was determined has been updated  
Species mix and current land use have been updated  
Description of vegetation types updated  
Species mixes and age classes have been updated  
The selection for fulfillment of age class distribution/sustainable management has been updated to the "not applicable" option  
The description for structural elements has been updated slightly to reflect the current progress  
The descriptions for the inventory methodology have been updated to directly reference the Field Measurement Protocol  
The descriptions for the calculation methodologies have been updated for clarity and completeness  
Carbon stock values have been updated  
The sampling error has been updated  
The reversal risk rating has been updated to include total buffer contribution  
The descriptions for the modeling plan have been updated for clarity and completeness  
The Project's modeled above-ground carbon stocks in the baseline scenario have been updated  
The estimate for the amount of carbon that will be stored in long-term harvested wood products in the baseline has been updated  
Updated value for the initial aboveground standing live carbon stock per acre for the project  
Updated Common Practice Statistic  
Updates have been made to reflect proper legal constraints affecting forest management  
Updated description of modeling techniques used  
Various map attachments have been updated to reflect changes and other verification requests  
The kml attachment has been updated to reflect the current project area  
The baseline onsite carbon stocks graph has been updated  
The graph depicting the final baseline of all required carbon stocks has been updated  
The financial feasibility assessment has been updated to properly reflect current project area conditions and comparisons to samples harvests
