PART IV. OFFSET PROJECT ELIGIBILITY REQUIREMENTS	
A. Have the Forest Project and associated Project Lands met and been in compliance with all local, state, and federal regulatory requirements during the Reporting Period?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
If no, provide an explanation of the non-compliance.	
B. Indicate how the offset project meets the definition of Natural Forest Management per Table 3.2 of the 2011 or 2014 protocol or per Table 3.1 of the 2015 protocol by completing Questions B1-B4 below: <i>Note: Reforestation projects with deferred inventory and Project Boundaries are still required to complete Questions B1-B4.</i>	
1. Native species:	
a) Does the project consist of at least 95% native species based on the estimated sum of carbon in the standing live carbon pool? <i>If "no," proceed to question 1b. Otherwise, skip to question B2.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
b) Describe how the project will result in achieving a 95% native species goal over the project life. See Inventory Report for demonstration of 95% native species requirement.	
2. Composition of native species:	
a) Does the Project Area naturally consist of a mixed species distribution such that no single species' prevalence exceeds the percentage value of standing live carbon shown under the heading 'Species Diversity Index' in the Assessment Area Data File? <i>If "no," proceed to questions 2b and 2c. Otherwise skip to question B3.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
b) Explain how the project will demonstrate a trend toward achieving the Species Diversity Index of native species and meet this requirement within 25 years. See Inventory Report for demonstration of species diversity requirement.	
c) If the Project Area does not naturally consist of a mixed species distribution: Will or have you provided a written statement from the government agency in charge of forestry regulation in the state where the project is located stipulating that the Project site is not capable of meeting the requirement of mixed species distribution.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. Distribution of age classes/sustainable management:	
a) Indicate how the project meets the requirement for sustainable management if regeneration or commercial harvesting is either planned or initiated within the Project Area demonstrating sustainable long-term harvesting practices. This applies to all forest landholdings of the Forest Owner(s) (check one of the boxes). <i>The full text associated for the options below is found in section 3.8.1 of the 2011 and 2014 protocol or subchapter 3.1(a)(2)(C) of the 2015 protocol.</i>	
<input type="checkbox"/> Third party certification <input type="checkbox"/> Adhere to a renewable long-term management plan <input type="checkbox"/> Employs uneven-aged silvicultural practices & maintain canopy retention averaging 40% across forest <input checked="" type="checkbox"/> Not applicable, no commercial harvesting is planned within the project area	

<p>b) On a watershed scale up to 10,000 acres (or the Project Area, whichever is smaller), projects must maintain, or make progress toward maintaining, a maximum of 40% of the project's forest lands in ages that are less than 20 years old. (Areas impacted by Significant Disturbance are exempt from this test until 20 years after reforestation of such areas.) Does the acreage within this project meet this requirement? <i>If "no," proceed to question 3c. Otherwise, skip to question B4.</i></p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<p>Explain how the project demonstrates continuous progress toward meeting this requirement within the next 25 years. See the Inventory Report for details pertaining to the age class requirement.</p>	
<p>4. Structural elements (standing and lying dead wood): How does the project ensure that structural elements are retained in sufficient quantities throughout the project life? Forest inventories include the measurement of structural elements. Although the project does not currently fulfill the Protocol requirements of maintaining at least 1 tC per acre of standing dead stocks, forest management will not include salvage harvesting and will include the retention of snags and coarse woody debris so that progress will be made and these goals can be met during the project lifetime.</p>	
<p>C. Has there been a decrease in the standing live carbon stocks within the Project Area over any 10-year consecutive period? <i>For the Initial Reporting Period, check "No." If "No," skip to Part V. If yes, answer questions C1 and C2.</i></p>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
<p>1. If yes, identify the appropriate option and provide additional documentation. <input type="checkbox"/> Decrease is due to the necessity to substantially improve the Project Area's resistance to wildfire, insect, or disease risks. Actions that will be taken to reduce the risks must be documented and the techniques used to improve resistance must be supported by relevant published peer reviewed research. <input type="checkbox"/> Decrease is associated with a planned balancing of age classes and is detailed in a long-term management plan that demonstrates harvest levels can be permanently sustained over time and that is sanctioned and monitored by a state or federal agency. This documentation must be submitted at the time of the Project's Listing. <input type="checkbox"/> Decrease is part of normal silviculture cycles for forest ownerships less than 1,000 acres. <i>Note: Documentation is required to be submitted.</i></p>	
<p>2. Has the Project's inventory of standing live carbon stocks fallen below the Project's baseline standing live carbon stocks, or 20 percent less than the Project's standing live carbon stocks at the project's initiation (whichever is higher)?</p>	<input type="checkbox"/> Yes <input type="checkbox"/> No
<p>PART V. PROJECT CHANGES</p>
