Ruby Canyon Environmental, Inc. (RCE) conducted the verification of the ACR573 A-Gas V1 (Project) for the reporting period December 11, 2018 to November 22, 2019. The goal of this GHG verification was to ensure that the GHG assertion is materially correct, that the data provided to RCE can be documented and if errors or omissions are detected, they be corrected. The verification was conducted to the ACR Standard v6.0, July 2019; ACR Validation and Verification Standard v1.1, May 2018; Certified Reclaimed HFC Refrigerants v1.1, September 2018; the validated project plan, December 18; and ISO 14064-3:2006.

The data and information supporting the GHG assertion were historical in nature. Based upon the processes, procedures and evidence reviewed, RCE concludes that the GHG assertion is a fair representation of the Project emission reductions or removals resulting during the reporting period. RCE confirms that the GHG assertion is:

- Without material discrepancy, and
- Verified to a reasonable level of assurance.

The verified emission reductions or removals are below.

Vintage	Baseline Emissions (mtCO ₂ e)	Project Emissions (mtCO ₂ e)	Leakage Emissions (mtCO ₂ e)	Emission Reductions (mtCO ₂ e)
2018	7,167	N/A	N/A	7,167
2019	76,535	N/A	N/A	76,535
Total	83,702	N/A	N/A	83,702
