2066	4,200	-	2116	-	-
2067	3,048	-	2117	-	-
2068	-	-	2118	-	-
2069	-	-	2119	-	-

The baseline harvest volumes were determined by modeling a harvest and growth regime considering all required and relevant legal constraints and financial considerations. The cubic foot volumes were calculated on cut trees the same way as onsite carbon stocks were for both the baseline and project. For more detail, see Appendix A in general and the Baseline Model Constraints section specifically.
