

American Carbon Registry Carbon Offset Project Listing Form

Instructions: Please fill out the below questions as completely and accurately as possible based on current project details. We understand some details may be adjusted prior to the validation of the full GHG Project Plan.

This form is required for all new ACR projects submitted for listing review per the Project Development Trajectory requirements presented in the ACR Program Standard, Chapter 6. Project Proponents should review the ACR eligibility criteria in the latest ACR Program Standard, Chapter 3, as well as the requirements of the relevant ACR-approved methodology to assess project eligibility prior to submitting this form.

This form must be completed and executed by a duly authorized representative of the Project Proponent.

General Project Details	
ACR Project ID	TBD
Project Title	Scott River Whiskey IFM Project
Chosen Methodology: Name and Version	Improved Forest Management Methodology for Quantifying GHG Removals and Emission Reductions through Increased Forest Carbon Sequestration on Non-Federal U.S. Forestlands, Version 1.3
Applicable version of ACR Standard	American Carbon Registry Standard Version 7.0
Project Location(s)	This project is in Northern California's Mid-Klamath basin. It is geographically located between the communities of Etna and Fort Jones in the western portion of Scott Valley, California. The project's western boundary is the Marble Mountain Wilderness area. The project area contains 18,773 acres of diverse conifer forest assemblage, with globally significant biodiversity, important headwaters and endangered species, alpine meadows, and wilderness trailheads linking to the Pacific Crest Trail.
Project Start Date	June 7, 2021
Crediting Period	06/07/2021- 06/06/2041
Expected first Reporting Period	06/07/2021-3/31/2022

Summary Description of Project	<p>The purpose of this IFM project is to increase the forest carbon stocks during the project period by implementing management actions that go above and beyond common practices in the local area by creating expanded voluntary riparian buffers, special wildlife areas, reduced intensity silvicultural practices, and increased rotation ages via FSC-certified management practices. The result of these changed management practices will be more carbon stored on the landscape over the project period. Also, this management regime will improve the overall forest health and resiliency of the project area, while creating and maintaining habitat for a range of wildlife species. Carbon revenue will replace some forgone timber harvest revenue over the project period.</p>
Process Questions	
Was/Is this Project Listed on Another Registry?	No
Will all relevant monitoring, metering and quantification requirements be followed as written in methodology?	Yes
Does the Project Proponent maintain undisputed title to all potential offsets that is clear, unique and uncontested?	Yes
Will the GHG Project Plan be validated within the timeframe required by the ACR Standard, Chapter 3, Table 2?	Yes
Is there an existing law, regulation, statute, legal ruling, or other regulatory framework in effect as of the project Start Date that mandates the Project Activity or effectively requires the GHG emissions reductions?	No
Project Management	
Project Proponent	Ecotrust Forest Management 721 NW Ninth Avenue, Suite 200 Portland, OR 97209
Technical Consultants, if any	L&C Carbon & TerraCarbon
Additional Affiliated Parties, if any	No

Signature	
Project Proponent Representative Submitting Form: Name and Title	Amrita Vatsal Managing Director, Business Development
Signature	
Date	December 22, 2021
