Dear American Carbon Registry (ACR),

We provide here a brief statement on the conclusion SCS Global Services (SCS) has reached regarding the GHG assertion documented in the monitoring report describing the GHG emission reductions or removal enhancements attributed to the Bluesource – East Branch Improved Forest Management project for the 01 July 2020 to 30 June 2021 reporting period. The overall goal of the third-party verification was to review impartially and objectively the claimed GHG emission reductions/removal enhancements claimed by East Branch Sportsman's Club against relevant ACR standards and the approved methodology. The verification was carried out against Version 6.0 of the ACR Standard and Version 1.3 of the Improved Forest Management Methodology.

SCS concludes, with no qualifications or limitations and with a reasonable level of assurance, that the GHG assertion and reported GHG emission reductions or removal enhancements as set out below conform to the verification criteria and are without material discrepancy, as defined by the ACR.

Reported Greenhouse Gas Emission Reductions or Removal Enhancements	
Period	Emission Reductions/Removal Enhancements (tCO ₂ e)
1 July 2020 to 31 December 2020	21,877
1 January 2021 to 30 June 2021	21,520

Lead Auditor Approval	 James Cwiklik, 3 March 2022
Internal Reviewer Approval	 Alexa Dugan, 3 March 2022
