Ruby Canyon Environmental, Inc. (RCE) conducted the verification of the ACR566 Bluesource – 100 Mile Wilderness Improved Forest Management Project (Project) for the reporting period June 2, 2021 – June 1, 2022. The goal of this GHG verification was to ensure that the GHG assertion is materially correct, that the data provided to RCE can be documented and if errors or omissions are detected, they be corrected. The verification was conducted to:

- ACR Standard v6.0 (July 1, 2019)
- ACR Validation and Verification Standard Version 1.1 (May 2018)
- Improved Forest Management Methodology for Quantifying GHG Removals and Emission Reductions through Increased Forest Carbon Sequestration on Non-Federal U.S. Forestlands v.1.3, April 2018
- Errata and Clarifications - Improved Forest Management Methodology for Quantifying GHG Removals and Emission Reductions through Increased Forest Carbon Sequestration on Non-Federal U.S. Forestlands v.1.3, September 30, 2021
- ISO 14064-3:2006 “Greenhouse gases – Part 3: Specification with guidance for the validation and verification of greenhouse gas assertions”.

The Responsible Parties for this Project include:

- Project Proponent
  - The Elliottsville Foundation - PO Box 148 Portland, ME 04112 Birmingham, AL 35203
- Project Developer
  - Anew Climate LLC - 2825 E Cottonwood Pkwy 400 Cottonwood Heights, UT 84121

The data and information supporting the GHG assertion were historical in nature. Based upon the processes, procedures and evidence reviewed, RCE concludes that the GHG assertion is a fair representation of the Project emission reductions or removals resulting during the reporting period. RCE confirms that the GHG assertion is:

- Without material discrepancy, and
- Verified to a reasonable level of assurance.

The verified emission reductions or removals are below.
