

Bluesource – 100 Mile Wilderness

Improved Forest Management Project Addendum

November 17, 2022

ACR 566

Elliotsville Foundation

Prepared by: Anew Climate, LLC

F. ENVIRONMENTAL AND COMMUNITY IMPACTS

F1. NET POSITIVE IMPACTS

The below identify Sustainable Development Goals to which the project aligns and positively contributes:

Sustainable Development Goal	Target	Project Action
6. Clean Water and Sanitation	6.6 By 2020, protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers, and lakes.	The watershed protection goals of the project proponent adhere to the local regulations for both incorporated and unincorporated townships in Maine. More details can be found in the proponent's management plan.
13. Climate Action	<p>13.1 Strengthen resilience and adaptive capacity to climate-related hazards and natural disasters in all countries.</p> <p>13.2 Integrate climate change measures into national policies, strategies, and planning.</p>	The goal of the project proponent in committing to sustainable forest management practices will be to continually sequester and prevent intensive forest management as described in both Section B6 and in Section E of this GHG Plan, respectively.
15. Life on Land	<p>15.1 By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains, and drylands, in line with obligations under international agreements.</p> <p>15.2. By 2020, promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally.</p>	The conservation goals of the project proponent can be found detailed in their management plan and include plans for variable habitats across the landscape, including early and late successional forest, and wetland and watercourse protections. These plans will create and bolster habitat for a variety of terrestrial and aquatic species across taxa to promote biodiversity.

	15.a. Mobilize and significantly increase financial resources from all sources to conserve and sustainably use biodiversity and ecosystems.
