PART IV. OFFSET PROJECT ELIGIBILITY REQUIREMENTS	
A. Have the Forest Project and associated Project Lands met and been in compliance with all local, state, and federal regulatory requirements during the Reporting Period?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
If no, provide an explanation of the non-compliance.	
B. Indicate how the offset project meets the definition of Natural Forest Management per Table 3.2 in the U.S. Forest protocol by completing Questions B1-B4 below: <i>Note: Reforestation projects with deferred inventory and Project Boundaries are still required to complete Questions B1-B4.</i>	
1. Native species: a) Does the project consist of at least 95% native species based on the estimated sum of carbon in the standing live carbon pool? <i>If "no," proceed to question 1b. Otherwise, skip to question B2.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
b) Describe how the project will result in achieving a 95% native species goal over the project life.	
2. Composition of native species: a) Does the Project Area naturally consist of a mixed species distribution such that no single species' prevalence exceeds the percentage value of standing live carbon shown under the heading 'Species Diversity Index' in the Assessment Area Data File? <i>If "no," proceed to questions 2b and 2c. Otherwise skip to question B3.</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
b) Explain how the project will demonstrate a trend toward achieving the Species Diversity Index of native species and meet this requirement within 25 years. <p>The species composition requirement for the Lukens Project is based upon each individual Assessment Area (AA). The species composition requirement is met for the Northern Atlantic Coastal Plain Swamp Hardwood & Cypress AA, as loblolly pine (<i>Pinus taeda</i>) accounts for 36% of relative basal area (below the 60% SDI). In the Northern Atlantic Coastal Plain Southern Pine AA, loblolly pine represents 79% of relative basal area, exceeding the 70% SDI. The species composition requirement in this AA will be achieved in the first 25 years of the project by reducing basal area of loblolly pine via thinning. Management actions should reduce relative basal area of loblolly pine from 79% (2018 estimate) to 70% by year 2040 in this AA. This involves: (1) thinning loblolly pine in the Mixed Forest with Pine stratum to maintain basal area at or below 38.8 ft²/acre over years 11 to 25, and (2) thinning loblolly pine in the Mature Pine stratum to maintain basal area at or below 55.8 ft²/acre over years 11 to 25. This conservatively assumes that basal area of other species remains constant over the timeframe. The project is already progressing towards meeting the Protocol requirement via natural forest stand dynamics.</p>	
c) If the Project Area does not naturally consist of a mixed species distribution: Will or have you provided a written statement from the government agency in charge of forestry regulation in the state where the project is located stipulating that the Project site is not capable of meeting the requirement of mixed species distribution.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
3. Distribution of age classes/sustainable management: a) Indicate how the project meets the requirement for sustainable management if regeneration or commercial harvesting is either planned or initiated within the Project Area demonstrating sustainable long-term harvesting practices. This applies to all forest landholdings of the Forest Owner(s) (check one of the boxes). <i>The full text associated for the options below is found in section 3.8.1 of the U.S. Forest protocol.</i>	
<input checked="" type="checkbox"/> Third party certification <input type="checkbox"/> Adhere to a renewable long-term management plan <input type="checkbox"/> Employs uneven-aged silvicultural practices & maintain canopy retention averaging 40% across forest <input type="checkbox"/> Not applicable, no commercial harvesting in planned within the project area	
b) On a watershed scale up to 10,000 acres (or the Project Area, whichever is smaller), projects must maintain, or make progress toward maintaining, a maximum of 40% of the project's forest lands in ages that are less than 20 years old. (Areas impacted by Significant Disturbance are exempt from this test until 20 years after reforestation of such	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

<p>areas.) Does the acreage within this project meet this requirement? <i>If "no," proceed to question 3c. Otherwise, skip to question B4.</i></p>		
<p>Explain how the project demonstrates continuous progress toward meeting this requirement within the next 25 years.</p>		
<p>4. Structural elements (standing and lying dead wood): How does the project ensure that structural elements are retained in sufficient quantities throughout the project life? Project area managers have not historically performed, nor plan to perform, any active removal of standing or lying dead wood from the project area.</p>		
<p>C. Has there been a decrease in the standing live carbon stocks within the Project Area over any 10-year consecutive period? <i>For the Initial Reporting Period, check "No." If "No," skip to Part V. If yes, answer questions C1 and C2.</i></p>		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
<p>1. If yes, identify the appropriate option and provide additional documentation. <input type="checkbox"/> Decrease is due to the necessity to substantially improve the Project Area's resistance to wildfire, insect, or disease risks. Actions that will be taken to reduce the risks must be documented and the techniques used to improve resistance must be supported by relevant published peer reviewed research. <input type="checkbox"/> Decrease is associated with a planned balancing of age classes and is detailed in a long-term management plan that demonstrates harvest levels can be permanently sustained over time and that is sanctioned and monitored by a state or federal agency. This documentation must be submitted at the time of the Project's Listing. <input type="checkbox"/> Decrease is part of normal silviculture cycles for forest ownerships less than 1,000 acres. <i>Note: Documentation is required to be submitted. See Section X for details.</i></p>		
<p>2. Has the Project's inventory of standing live carbon stocks fallen below the Project's baseline standing live carbon stocks, or 20 percent less than the Project's standing live carbon stocks at the project's initiation (whichever is higher)?</p>		<input type="checkbox"/> Yes <input type="checkbox"/> No
<p>PART V. PROJECT CHANGES</p>
