Ruby Canyon Environmental, Inc. (RCE) conducted the verification of the ACR823 A-Gas South Korea 1 project (Project) for the reporting period November 1, 2022 – November 16, 2022. The goal of this GHG verification was to ensure that the GHG assertion is materially correct, that the data provided to RCE can be documented and if errors or omissions are detected, they be corrected. The verification was conducted to the ACR Standard v7.0, December 2020; ACR Validation and Verification Standard v1.1, May 2018; The Destruction of Ozone Depleting Substances from International Sources, v1.0, April 2021; the validated Project Plan, April 14, 2023; and ISO 14064-3:2006.

The data and information supporting the GHG assertion were historical in nature. Based upon the processes, procedures and evidence reviewed, RCE concludes that the GHG assertion is a fair representation of the Project emission reductions or removals resulting during the reporting period. RCE confirms that the GHG assertion is:

- Without material discrepancy, and
- Verified to a reasonable level of assurance.

The verified emission reductions or removals are below.

Vintage	Baseline Emissions (mtCO <sub>2</sub> e)	Project Emissions (mtCO <sub>2</sub> e)	Emission Reductions (mtCO <sub>2</sub> e)
2022	95,353	6,407	88,945
